# BROSWER BASED
BUSINESS INTELLIGENCE.

ABM BI XPRESS IS A LIGHTER, BROWSER BASED VERSION OF THE FULL ABM BI TOOL. IDEAL FOR BUSY EXECUTIVES AND ON-THE-GO EMPLOYEES WHO NEED FAST ACCESS TO PRE-DEFINED REPORTS AND FAVOURITES. PERFECT FOR MOBILE USERS.

But the true genius of the new realease is the ability for further analysis. Predefined reports and dashboards are just the starting point. Drill up and drill down, and perform lateral analysis all within the browser window. Xpress is a simple, yet surprisingly powerful analysis tool.

ABM BI Xpress offers password protected security, utilising Microsoft SQL server and Microsoft IIS server technology. Which means individual users can login to Xpress to view personalised, pre-defined reports. Each user may view an entirely different

dashboard, or different reports, which makes Xpress a cost-effective way of distributing large amounts of controlled, up-to-date data to staff, key customers and key suppliers.

Generating the pre-defined reports for viewing on the web via ABM BI Xpress couldn't be simpler. Once installed, simply save a favourite in the regular fashion using ABM BI - a straightforward task that takes seconds. Then publish to ABM BI Xpress. And nominate which user, users or groups will have access to this report. All without the need for IT. Brilliant.

Of course ABM BI Xpress is flexible enough to fit into most IT eco- systems. And from just a few users, through to a few hundred, Xpress is scalable to suit your company.
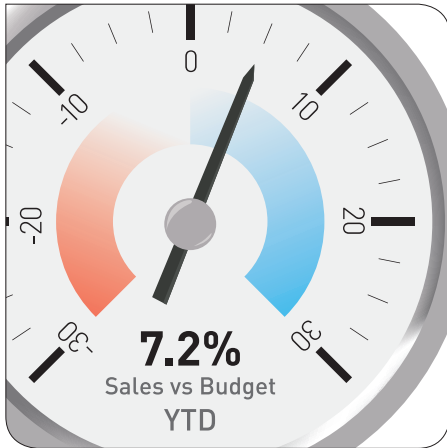

SIMPLE SOFTWARE.
STAGGERING RESULTS.

ABM BI EXPRESS FEATURES

DASHBOARDS

The optional ABM BI Reporting Services module can generate powerful Dashboards and Key Performance Indicators.

BROWSER BASED

No software to learn or install. Access from any PC or mobile device, anywhere, anytime.

PRE-DEFINED

Login to Xpress to view personalised, pre- defined reports. Instantly. Always stay up-to- date.

MULTI-DIMENSIONAL

Predefined reports are just the starting point. Drill up and drill down, and perform lateral analysis all within the browser window.

IN CONTROL

The in-built Management Studio tool allows management to have full control over what data employees have access to.
