Introducing a fully integrated business & accounting solution ideal for the construction industry *

ABM

ADVANCED BUSINESS MANAGER

ABM has been designed and developed by accountants and IT professionals to be the next generation of accounting software for progressive businesses.

Building on the past principles of accounting software and paying close attention to the demands of today's business environment, ABM is an innovative accounting and business management system suited to the construction industry. Using the latest technology and integration facilities, ABM is a flexible and advanced management system which streamlines the running of your business with its array of insightful features.

Particularly useful are ABM's job costing and reporting features, currently being used in today's construction industry. Included in the package are ABM's optional modules: Project Invoicing, Subcontractor Claims, Job & Timesheeting and Business Intelligence, providing an integrated workflow for efficient cost tracking and billing with sophisticated business analysis.

JOB & TIMESHEETING

Designed to provide a mechanism for a medium to large number of staff entering timesheet information against jobs and projects. The module has the ability to set up and charge disbursements to jobs, while reducing the unnecessary hassle of daily time entry for streamlined billing and job management.

BUSINESS INTELLIGENCE

Identify the strengths and weaknesses of your business through analytical assessment, costs and revenue comparisons, ratio and bottom line analysis, customer and staff performance review, and a range of in-depth analysis tools. The module focuses on delivering relevant information through easy to interpret visually attractive interfaces.

SUBCONTRACTOR CLAIMS

The module is designed for entry of subcontractor claims against a job or project. This allows subcontractors to be setup as suppliers in the system and assign them to specific jobs or projects, allowing the processing of interim claims submitted from subcontractors for work done at a stage.

PROJECT INVOICING

The module allows you to invoice charges to a job according to variable criteria, allowing fast, flexible and simple invoice or draft invoice creation for customer projects and jobs. It lets the user choose the amount to invoice and the value of work in progress to be written off.
