The MYOB Conversion program will import from CSV files.

To convert MYOB data, you need to export information from MYOB before running the conversion program. Having done this, the conversion will bring over master files, balances and debtor / creditor history. Stock movement is not brought across. GL including balances but not transactions are brought across.

The procedure to upgrade a MYOB database is:

1. Use the File/Export menu in MYOB to create CSV Text files containing the data to be passed to ABM. It is essential that all format and file name defaults be accepted and that the "Match ALL" button be used to export all fields.
2. Create a new company database in ABM as an Access database. Make sure that the ledger account codes are 5 characters long and there are no sub-accounts specified
3. Open the new database in ABM so that it upgrades itself to the current version.
4. Close ABM, re enter it and do the MYOB import.
5. Use the new MYOB upgrade program in ABM to import the data from the CSV text files.
6. Make sure the data, including invoices, has populated okay.
7. Upsize the data to SQL Server.

Note: ABM's MYOB conversion program accepts tab separated files from MYOB not comma separated.
